A & M Barriers

Liquid applied air barrier over exterior sheathing Stamford CT

Self adhered membrane behind cement siding Silver Spring MD

Membranes and barriers protect the building from air leakage and vapor transmission. Sealing the building envelope is one of the most cost effective ways to increase the energy efficiency of a building.

STO GoldGuard application Marriott Hotel New York ave Washington DC.

STO GoldGuard barrier Embassy Suites Hotel San Antonio TX

Pillar Construction installs a wide variety of barriers that work in conjunction with any exterior cladding to protect and seal the building.

Pillar Construction is an ABAA certified applicator for the professional installation of self adhered and fluid applied membranes. Very popular in the northern states, air barriers have become a standard building component for all environmentally friendly structures

As a skin contractor, Pillar understands and manages all the components of the building envelope. Seamless installation and proper sequencing of components result in a higher quality service.

Specialty Finishes

Fiat Alexandria VA

Terra-Cotta RainScreen Facade Systems

New products and facade systems such as terra-cotta and cement board **rain screen systems** are replacing traditional skin claddings. These systems bring a higher challenge to the building skin contractor. New and innovative exterior claddings, waterproofing products, exterior substructures and framing, all behave as a synergetic assembly.

Pillar Construction experience with all the components of the building skin provides a comprehensive approach to the building's envelope.

Pillar Construction understands and manages all the components of the building envelope for a seamless installation of all the exterior wall components.

Restoration

Bringing back the beauty and proper functionality of existing structures requires expertise and understanding of building technologies.

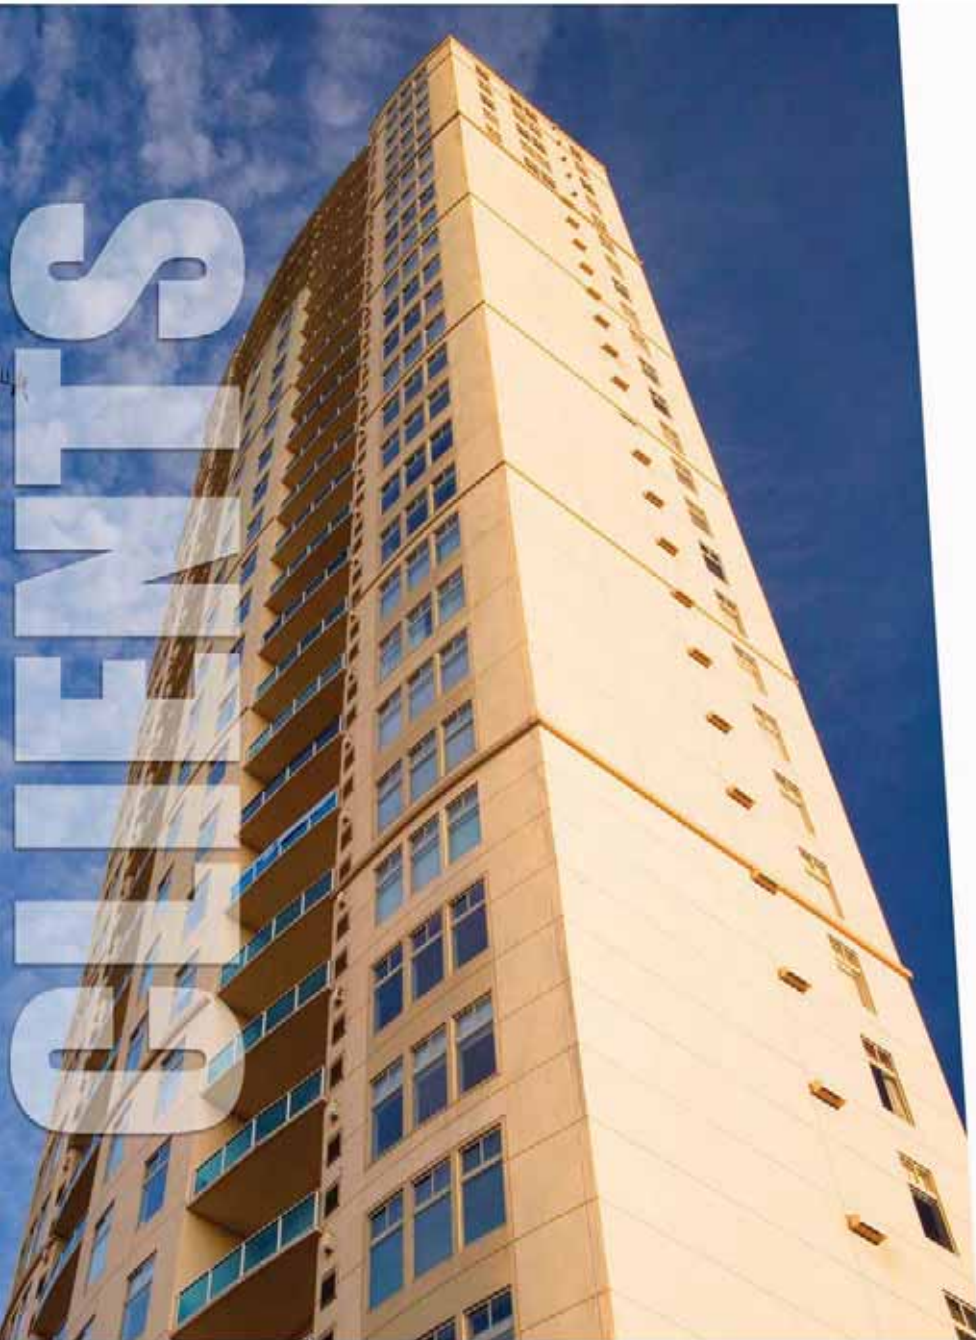

Pillar Construction offers the experience that an extensive portfolio of restoration projects provides and a detailed project management approach to deal with unforeseen conditions inherent to a restoration projects.

The exterior skin of a building has a limited life span and requires maintenance. Pillar Construction has worked on partial repairs and total re-skin of high-rise structures.

While fully occupied, the exterior cladding and sheathing were removed and new sheathing, air barrier and new finish cladding were installed. The new building skin performs to current energy requirements. The buildings not only regained the structural performance of the exterior components but they also got a face-lift and renewed look.
